

IVIG Treatment

Posted by fdrpe - 17 Jul 2012 23:25

Doc Sarah,

Do you know of any research or data on the effectiveness of IVIG treatment on Arachnoiditis. I have Arachnoiditis, Cauda Equina Syndrome, Demyelinating Disease, Tethered Cord and a lot of pain. For the demyelinating disease my physician recommends IVIG treatment (my serum IgG is low also). We have been through numerous IV methylprednisolone treatments. I was wondering if there was any information out there on the effects of IVIG on Arachnoiditis. For example does it complicate Arachnoiditis? Does it help the spinal cord immune system?

Please let me know if you are aware of any research, articles, or information regarding the effects of IVIG on Arachnoiditis.

Thanks.

=====
