

medications for severe muscle cramps!

Posted by gmak - 05 Jan 2014 19:36

I remember reading about the use of calcium channel & beta blockers & antiparkinsonism drugs that are sometimes prescribed for the extreme muscle cramps caused by arach & cannot find the reference now. Also, can facial spasms be a part of myofascial neuropathy or trigeminal neuralgia? Thank you for any help regarding this problem!

How are you doing gmak ? Have you managed to stay on an even keel....

I always remember - Jesus said, "Ask and you will receive, and your joy will be complete" in John 16:24
