

helping

Posted by gmak - 05 Jan 2014 20:50

I just realized that as a mostly shut in, isolated, in severe pain arach patient that i have almost zero opportunity to make the ravages of what arach is known to others. My family members dont have enough time to even learn about it, my drs dont want to talk about it & my congressman sent me a form letter. Looking for suggestions on how i can help dispel the silence of what arach is & let the truth be known.

Thats a big problem gmak, as nobody seems interested in arac. They've never heard of it so don't really care. Sad and very frustrating.
